| TEAM ID | PNT2022TMID52351 |
| PROJECT NAME | A GESTURE BASED TOOL FOR STERILE BROWSING OF RADIOLOGY IMAGES |
| MAXIMUM MARKS | 4 MARKS |

| A GESTURE BASED TOOL FOR STERILE BROWSING OF RADIOLOGY IMAGES | Entice  How does someone initially become aware of this process? | Enter  What do people experience as they begin the process? | Engage  In the core moments in the process, what happens? | Exit  What do people typically experience as the process finishes? | Extend  What happens after this experience is over? |
|---|--|--|---|--|---|
| Steps  What does the person (or group) typically experience? | Find solutions  To avoid infection for patient, the surgeon tries to find a solution. Found the gesture based tool. The user found that the gesture based tool is optimal to solve the problem. Listing requirements and installation. The surgeon needs the computer with a good webcam not then installing the software. | Browsing the UI  The user using the browsing interface of our software. Learning  The surgeon learns to use our Software. | Starting to use in real scenario  The user trains our software and use that in real scenario. Experiencing  The surgeon feels comfortable and convenient. | Prompt for feedback  After the work done the feedback prompt will be shown to the customer. Writing and submitting feedback  The user writes and gives good feedback and submitting the feedback. | Making his routine  The user will use the Software again when he needs. |
| Interactions  What interactions do they have at each step along the way? • People: Who do they see or talk to? • Places: Where are they? • Things: What digital touchpoints or physical objects would they use? | Asking for suggestions from other surgeons  Visit the website  Download our software  | Interact to the UI  Getting knowledge about software  | Customize the settings  changing the action (e.g. image resize...) for specific gesture  | Again changing the settings that worked wrong  Verifies that the settings has changed  | Recommend this Software to other Surgeons  |
| Goals & motivations  At each step, what is a person's primary goal or motivation? ("Help me..." or "Help me avoid...") | To avoid spreading of infection  To find a good solution for the sterile browsing of radiology images  | To learn about our software  To practice to give gesture inputs  | To complete his need (browsing of radiology images)  To avoid complexity  | To verify the accuracy of the software  Trying to improve the software by giving different input gestures  | Tweaking some configurations  |
| Positive moments  What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting? | Work can be easily done  Prevents infection  Computer with simple webcam is enough  | Good and friendly UI  No big configurations needed  | Mostly accurate  Best performance  | Work done easily  | It is productive applicable in various departments  Worth to suggest for other surgeons  |
| Negative moments  What steps does a typical person find frustrating, confusing, angering, costly, or time-consuming? | The question arises: Is it better than manual browsing?  The question arises: Does it work with any webcam and computer?  | The user has to remember the various gestures  It is not precise and sometimes it is vague  | It is less accurate sometimes  Focus issues occur sometimes while scanning gesture with low quality webcam  | The user should tweak some settings in order to make the software accurate at next time  The user should close the software properly this may take some time  | The user will feel inconvenient without this software  |
| Areas of opportunity  How might we make each step better? What ideas do we have? What have others suggested? | Increase awareness  Adding more details and procedures in the website  | To increase the support for all kind of devices  Increase the support for low quality webcams  | To increase the performance  To make the UI better  We can improve the software to work with low lighting conditions  | The feedback can be obtained  We can collect the input and output data that obtained during process  | We can improve the software with the feedback obtained from the user  We can increase reliability with the collected data  |
